

Doctype

A Flat and Minimalistic Portfolio .psd template

Thanks for purchasing a template from Codestag, you're awesome!

In the downloaded folder, you will find the photoshop files of Doctype, in case you want to further customize it. The files are well grouped and properly layered to make the slicing process easy. The designs are highly customizable, because of the use of layer styles and shape layers. So if you want to change colors and details, you can tweak the layer style of any specific layer and you can easily customize it's appearance.

Please download and install the font from the [FontAwesome](#) icon set prior to open the .psd files.

The files also use the [Lato webfont](#) by Google.

Credits and Resources

In the demo we have used some awesome images for the blog, and artwork for portfolio items. Here is where we got them from:

For portfolio items we used flat icons from pixeden:

<http://www.pixeden.com/media-icons/flat-design-icons-set-vol1>

<http://www.pixeden.com/media-icons/flat-design-icons-set-vol2>

For the blog section we have used photos from Unsplash.com:

<http://unsplash.com/>

For icons we have used the [FontAwesome](#) iconset.

Interested in the WordPress Version of this Template?

If you are interested in a WordPress version of this template, we have good news for you! A responsive, retina display ready WordPress version of Doctype is available from here: <http://codest.ag/DcTyPe>
